evoxx technologies selects Baker Dillon Group LLC for trade public relations

CLOVIS, CA (Sept. 25, 2016) - evoxx technologies GmbH, a German industrial biotechnology company focusing on the development and production of enzymes and novel carbohydrate ingredients produced by its patented enzymatic bioconversion platform has selected Baker Dillon Group LLC to handle the U.S. trade public relations introduction of evoxx and its novel new ingredients and technologies.

evoxx technologies, with two locations in Germany - on the creative campus in Monheim am Rhein, and on the biotech campus Hermannswerder in Potsdam, was formed following the acquisition of aevotis GmbH by evocatal GmbH. The new company's vision is to become a leading provider of innovative enzyme and carbohydrate products for the nutritional health and wellness markets. A strong patent protected technology platform enables the development and marketing of exclusive carbohydrate oligomers and polymers for the global food market.

"In the functional food market we see an increasing demand for novel ingredients with strong scientifically supported health benefits," says Dr. Thorsten Eggert, evoxx managing director and chief executive officer. "To meet the needs of its customers, the food industry needs novel and multi-functional ingredients which are in line with recent scientific findings and studies on healthy diets and we have the enzyme technology to do it," adds Eggert.
